Inequality in Europe – and what the EU could do about it

Thomas Piketty
Paris School of Economics

EUSA Conference, Boston, March 6 2015

This lecture: three points

- 1. Inequality in the long-run: over the course of the 20th century, Europe has become more egalitarian than the US → institutions and policies matter
- 2. But the European social state is fragile: lack of fiscal union, tax competition, public debt crisis, rise of nationalism
- 3. EU institutions need to be fundamentally transformed in order to address this: Euro-chamber

(see « Manifesto for a Euro political union »)

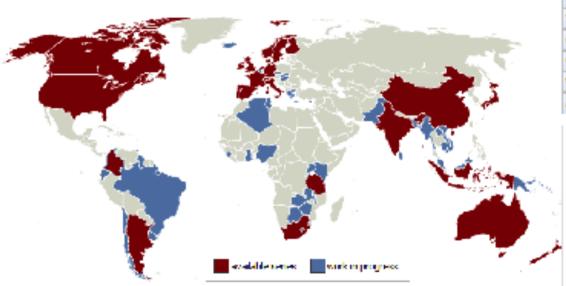

1. Inequality in the long run

- Here I will present some results based upon Capital in the 21st century (Harvard University Press, March 2014)
- This book studies the global dynamics of income and wealth distribution since 18^c in 20+ countries; I use historical data collected over the past 15 years with Atkinson, Saez, Postel-Vinay, Rosenthal, Alvaredo, Zucman, and 30+ others; I try to shift attention from rising income inequality to rising wealth inequality
- All data series are available in a technical appendix available on line: see http://piketty.pse.ens.fr/capital21c

THE WORLD TOP INCOMES DATABASE

 Three facts about inequality in the long-run: income inequality, wealth-inequality, wealth-income ratios
 (Piketty-Saez, « Inequality in the long run », Science 2014)

 Fact n°1: in 1900-1910, income inequality was higher in Europe than in the United States; in 2000-2010, it is a lot higher in the United States

50% Share of top income decile in total pretax income (decennial averages) → Top 10% income share: Europe 45% **─**Top 10% income share: U.S. 40% 35% 30% 25% 1900 1910 1920 1930 1940 1950 1960 1970 1980 1990 2000 2010

Figure 1. Income inequality: Europe and the U.S., 1900-2010

The share of total income accruing to top decile income holders was higher in Europe than in the U.S. around 1900-1910; it is a lot higher in the U.S. than in Europe around 2000-2010.

Sources and series: see piketty.pse.ens.fr/capital21c (fig.9,8)

50% → Share of top decile in total income (including capital gains) Share of top decile in national income → Excluding capital gains 45% 35% 30% 25% 1910 1920 1930 1940 1950 1960 1970 1980 2000 2010 1990 The top decile share in U.S. national income dropped from 45-50% in the 1910s-1920s to less than 35% in the 1950s (this is the fall documented by Kuznets); it then rose from less than 35% in the 1970s to 45-50% in the 2000s-2010s.

Sources and series: see

Figure I.1. Income inequality in the United States, 1910-2012

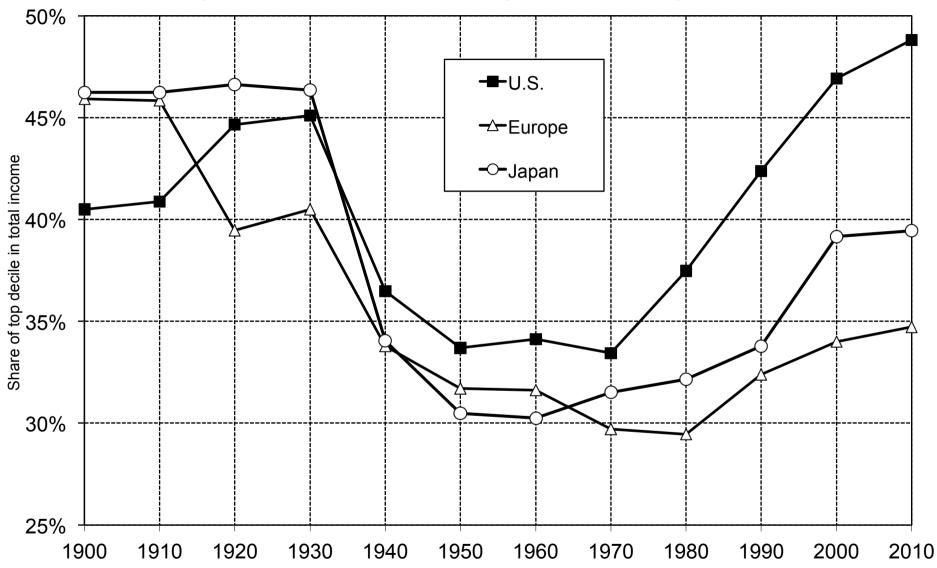

50% Share of top income decile in total pretax income (decennial averages) → Top 10% income share: Europe 45% **─**Top 10% income share: U.S. 40% 35% 30% 25% 1900 1910 1920 1930 1940 1950 1960 1970 1980 1990 2000 2010

Figure 1. Income inequality: Europe and the U.S., 1900-2010

The share of total income accruing to top decile income holders was higher in Europe than in the U.S. around 1900-1910; it is a lot higher in the U.S. than in Europe around 2000-2010.

Sources and series: see piketty.pse.ens.fr/capital21c (fig.9,8)

Top 10% Income Share: Europe, U.S. and Japan, 1900-2010

The top decile income share was higher in Europe than in the U.S. in 1900-1910; it is a lot higher in the U.S. in 2000-2010. Sources and series: see piketty.pse.ens.fr/capital21c.

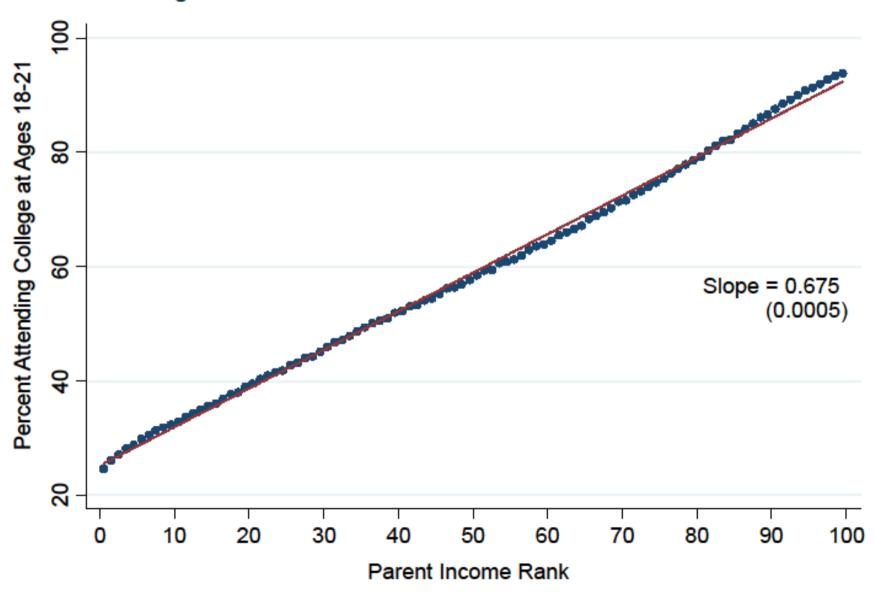

- The rise in US inequality in recent decades is mostly due to rising inequality of labor income
- It is due to a mixture of reasons: changing supply and demand for skills; race between education and technology; globalization; more unequal to access to skills in the US (rising tuitions, insufficient public investment); unprecedented rise of top managerial compensation in the US (changing incentives, cuts in top income tax rates); falling minimum wage in the US
 - → institutions and policies matter

10€ \$12.0 9€ \$10.8 8€ \$9.6 7€ \$8.4 Hourly minimum wage \$7.2 6€ 5€ \$6.0 4€ \$4.8 3€ \$3.6 ← France (2013 euros, left hand scale) ᢙᢗᢐᢐᢋ᠘᠘᠘᠘᠘᠘᠘᠘ 2€ \$2.4 United States (2013 dollars, right hand scale) 1€ \$1.2 0€ \$0.0 1950 1955 1960 1965 1970 1975 1980 1985 1990 1995 2000 2005 2010 Expressed in 2013 purchasing power, the hourly minimum wage rose from \$3.8 to \$7.3 between 1950 and

Figure 9.1. Minimum wage in France and the U.S., 1950-2013

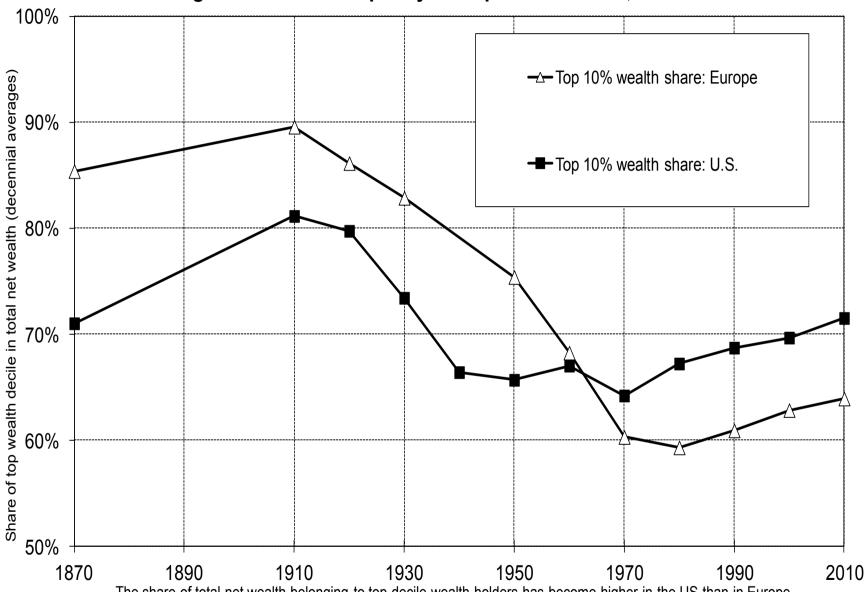

2013 in the U.S., and from €2.1 to €9.4 in France. Sources and series: see piketty.pse.ens.fr/capital21c.

College Attendance Rates vs. Parent Income Rank in the U.S.

- Fact n°2: wealth inequality is always a lot higher than income inequality; it is now higher in the US than in Europe
- Fact n°3: wealth inequality is less extreme today than a century ago in Europe, although the total capitalization of private wealth relative to national income has now recovered from the 1914-1945 shocks
- There's nothing bad with high wealth-income ratio (as long as there's a strong middle class share in total wealth), but this creates new policy challenges, particularly for Europe

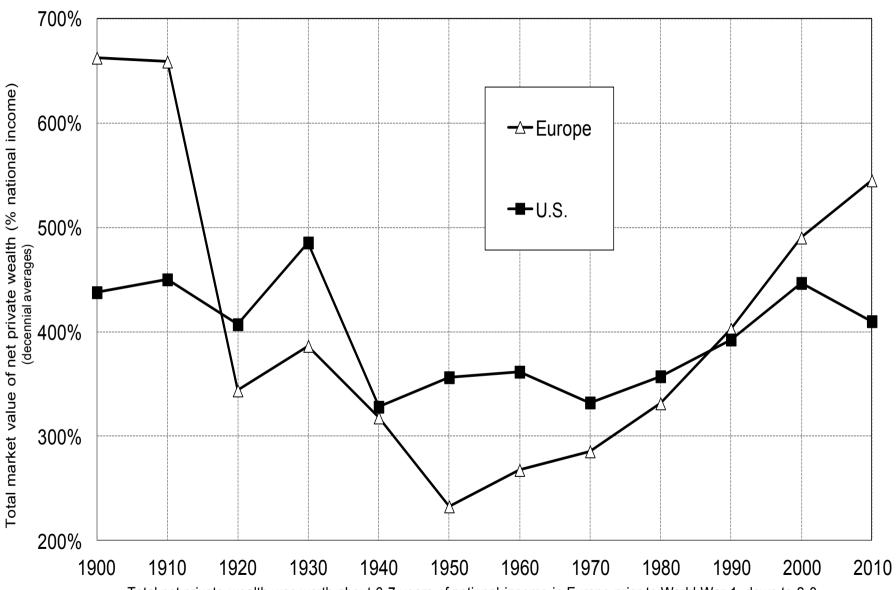

Figure 2. Wealth inequality: Europe and the U.S., 1870-2010

The share of total net wealth belonging to top decile wealth holders has become higher in the US than in Europe over the course of the 20th century. But it is still smaller than what it was in Europe before World War 1.

Sources and series: see piketty.pse.ens.fr/capital21c (fig.10,6)

Figure 3. Wealth-income ratios: Europe and the U.S., 1900-2010

Total net private wealth was worth about 6-7 years of national income in Europe prior to World War 1, down to 2-3 years in 1950-1960, back up to 5-6 years in 2000-2010. In the US, the U-shapped pattern was much less marked. Sources and series: see piketty.pse.ens.fr/capital21c (fig.5,1)

2. European social state is fragile

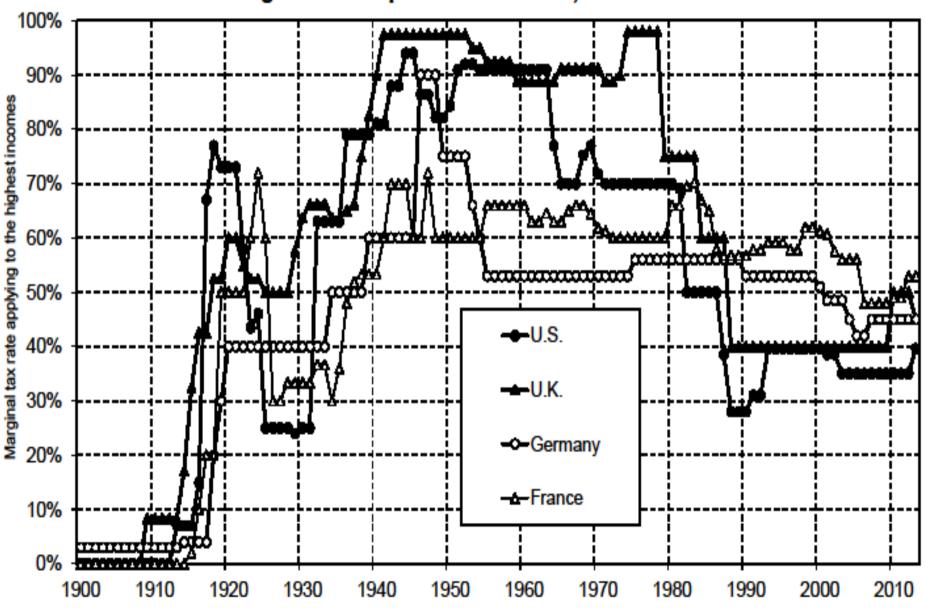

- European social state relies on high tax/GDP ratio
- Rising tax competition and lack of fiscal union make it difficult to sustain high tax levels and to maintain fiscal consent: consensus about tax fairness is fragile
- Top personal income tax rates have fallen more in the US then in Europe, but corporate tax rates have fallen a lot more in Europe
- Without a common euro-corporate tax, effective tax rates on large corporations are likely to → 0%

60% Sweden 50% Total tax revenues (% national income) -□-France **─**U.K. -0-U.S. 10% 0% 1870 1890 1910 1930 1950 1970 1990 2010

Figure 13.1. Tax revenues in rich countries, 1870-2010

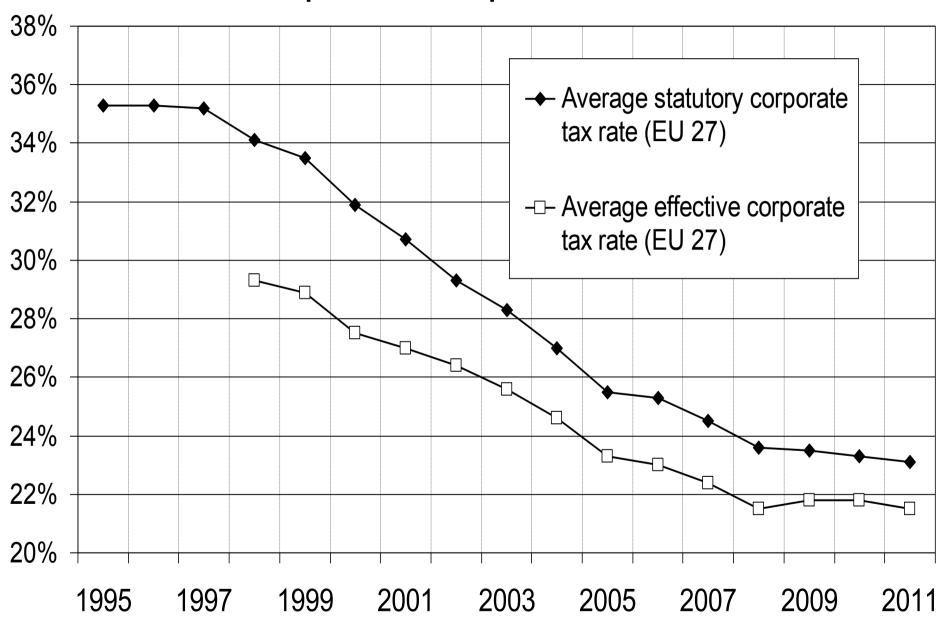

Total tax revenues were less than 10% of national income in rich countries until 1900-1910; they represent between 30% and 55% of national income in 2000-2010. Sources and series: see piketty.pse.ens.fr/capital21c.

Figure 14.1. Top income tax rates, 1900-2013

The top marginal tax rate of the income tax (applying to the highest incomes) in the U.S. dropped from 70% in 1980 to 28% in 1988. Sources and series: see piketty.pse.ens.fr/capital21c.

Corporate tax competition in the EU

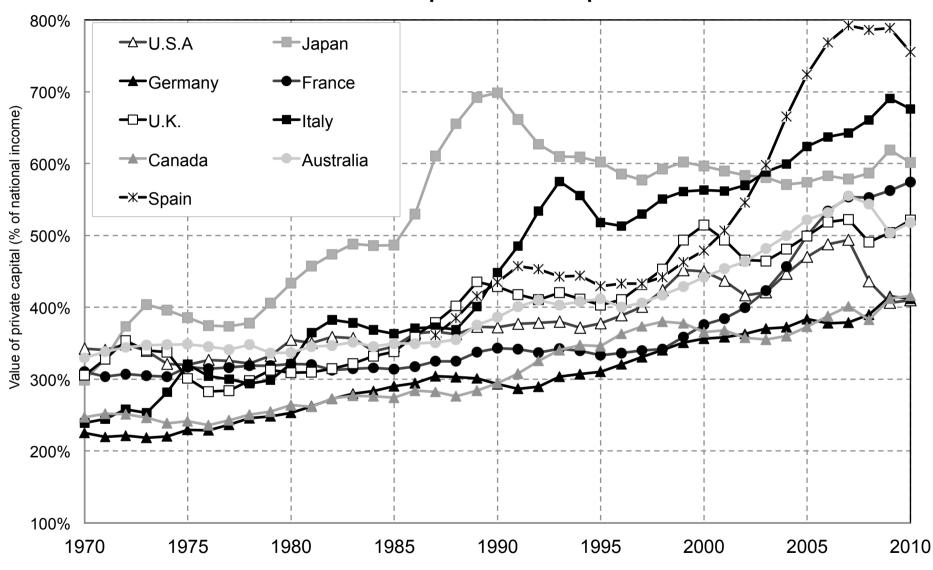

Source: Taxation trends in the EU, Eurostat 2011

 Rise of European private wealth-income ratios is not bad in itself... except that financial and real-estate bubbles need to be properly regulated

→ new policy challenges (prudential regulation, access to property for young generations, return of inheritance)

Figure S5.2. Private capital in rich countries: from the Japanese to the Spanish bubble

Private capital almost reached 8 years of national income in Spain at the end of the 2000s (ie. one more year than Japan in 1990). Sources and series: see piketty.pse.ens.fr/capital21c.

- Rise of European private wealth-income ratios is not bad in itself... except that it is partly due to transfers from public to private wealth: privatization of public assets at low prices, rise of public debt
- → public debt crisis, lack of confidence in Eurozone institutions, recession, unemployment (GDP 2015 < GDP 2007; lost decade)</p>
- → structural pb: a single currency with 18 diff. public debt, 18 diff. interest rates, 18 diff. tax systems = a very bad and unstable system

800% ---Japan --∆--U.S. 700% ---Germany France -□-U.K. ---Italy Value of capital (% national income) 600% ---Canada Australia 500% 400% 300% Private capital 200% Public capital 100% 0% -100% 1970 1975 1980 1985 1990 1995 2000 2005 2010 In Italy, private capital rose from 240% to 680% of national income between 1970 and 2010, while public capital

dropped from 20% to -70%. Sources and series: see piketty.pse.ens.fr/capital21c.

Figure 5.5. Private and public capital in rich countries, 1970-2010

3. What can the EU do about this?

- See « Manifesto for a Euro political union »
- Common corporate tax, fight against tax havens, etc.: EU is perceived by lower social groups as being pro-capital; this needs to be reversed
- Common redemption fund for all euro-zone public debts >60% GDP: separate country accounts, but common interest rate
- Public-private investment plan in universities, innovation, green technologies

- In order to adopt these policies, one needs to fundamentally transform the existing EU institutional architecture: with unanimity rule for fiscal issues, it is impossible to do anything; the system of automatic rules and sanctions for choice of deficit level is not working
- In order to adopt these policies (corporate tax base and rate, level of the deficit, euro-zone budget, etc.) under majority rule, one needs a euro-zone parliament
- Best option: Euro-chamber based upon members of national parliaments (in proportion to each country's population: say, 40 NMPs from Germany, 30 NMPs from France, etc.)

- Is the Euro-chamber the same as pre-1979 EP?
- No: Euro-chamber would have substantial legistative powers (pre-1979 EP was a deliberative assembly)
- Europe has yet to invent its own original form of bicameralism: even if one day all countries adopt the euro (this will take time...), it makes sense to have two separate chambers: (1) a European Parliament elected directly by the citizens of all member countries, and (2) a Euro Chamber representing the member countries through their national parliaments
- This is a way to force NMPs to become European law makers and to stop complaining about Europe
- Councils of heads of states or finance ministers will never work like a parliamentary chamber: you cannot represent a 80million or 60million country with 1 individual

Is this realistic?

- Yes. E.g. if France and Italy were putting this propoal on the table, then ultimately a compromise would be worked out with Germany
- Pb: national governments have spent a lot of energy since 2012 trying to pretend that the new 2012 treaty (fiscal compact) is working; in order to change their discourse, maybe we need a big shock
- Greek electoral shock not enough? Do we need to wait until Spanish elections in late 2015? Or French regional elections? Or new financial panic?
